Inspiration msg

Our team, MJS 2.0, identified a gap in the school's digital transparency and functionality. This realization inspired us to create a modern, innovative platform designed to connect students, teachers, and administrators more efficiently. We wanted to build something that not

only simplifies communication but also improves access to information and resources.

aim

To create a platform where transparency is the main competency and provide a website that will further improve educational efficiency.

hypothesis

Creating an interactive and well-organized school website that will allow students, teachers, and parents to access information more easily, and

stay more engaged with ongoing and upcoming school activities.

materials

Visual Studio Code, Firebase, Figma

Procedure

Collect data, implement data into programming files and create the website itself with both front and back end, with full functionality.

Outcomes

Improved communication within the hierarchy of the school. Full public transparency about everything of the school.

Conclusion

MJS 2.0 brings a smarter and more innovative future to our school. It creates better communication and access to learning, making education easier and more exciting for everyone.

future scope

The platform will continue to enhance the digital operations of MJS by improving transparency and strengthening communication across all levels of the school. Future developments will be driven by feedback from the SMT and school management.

Challenges

Limited budget, no professional support, and a tight schedule made the project time-consuming and prone to minor bugs due to reduced testing.
